

DigiCOPY & The Environment.

At DigiCOPY, we recognize that the future of our business is dependent on the responsible use of our natural resources. We understand that this involves commitment and actions alike. Therefore, we have implemented a Sustainable Management Policy through which we strive to reduce waste, recycle print materials, and educate our co-workers.

Smart Partnerships. Ensuring our Future.

They're not just logos. They represent our commitment to protecting our environment and natural resources for us, you and the future. These certifications identify our relationships with suppliers who adhere to forest-management standards and regulations that help protect our country's biogeographic regions, provide public information about certification, and promote Forests and Forest Product certifications around the world.

Did you know?

Trees, which are the primary raw material for making paper, are a renewable resource. For every tree harvested in a managed forest, several more are replanted or naturally regenerated in its place. Sustainable forest management practices also help protect habitats and rare or threatened ecosystems, providing safe places for animals to repopulate and plant species to thrive.

CALIPER: Refers to the thickness of any sheet of paper, measuring by a micrometer gauge. The paper weight (#) refers to how much a ream of 500 sheets weighs when cut to the standard basis size. Since each paper type has its own standard basis size, the assigned weight will not always reflect the thickness of a paper in relation to other paper types.

- Meets USPS postcard requirements
- Matching envelopes

Special Order Papers Available!
 Minimum orders may apply.
 Ask a co-worker for details.
